JOÃO CUNHA

Software Engineer

joaomarinho.cunha@gmail.com | Porto, Portugal

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with over 10 years of experience in designing, developing, and maintaining robust, scalable software systems. Proficient in React, TypeScript, Node.js, PostgreSQL, AWS, Docker, and related technologies, with experience delivering end-to-end solutions across web and mobile platforms. A collaborative and results-driven professional committed to writing high-quality code, solving complex technical challenges, and contributing to the success of cross-functional teams.

WORK EXPERIENCE

Senior Staff Software Engineer

May 2019 - Present

Mindera

- Built the new Burberry homepage and landing page experiences from the ground up with Next.js, Node.js, React and TypeScript, [serving million of monthly visitors].
- Led the creation of a full-fledged design system [adopted by multiple teams], with 99% coverage across unit, integration and screenshot tests.
- Cut the main application's JavaScript bundle by 60%, improving page load time by 5%.
- Led the effort to migrate from Jest to Vitest. Reduced test execution time by 31% while increasing test coverage, improving efficiency and scalability.
- Built a custom visual regression plugin for Vitest, which lacked screenshot testing at the time, to protect our applications and the design system from unintended UI changes.
- Created a Playwright integration testing layer that separated true integration tests from unit tests [and cut CI feedback time by 50%].
- Built the React Native app for Hold, an all-in-one crypto and cash app [used worldwide].
- Built Hold's marketing website (hold.io) with Next.js.
- Built a custom backoffice app that lets managers and support teams resolve customer requests.

Software Engineer

Aug 2014 - May 2019

Wiremaze

- Added features to and maintained a complex CMS system used to build municipalities' websites;
- Built and maintained CMS systems using Ruby on Rails, Laravel, and .NET;
- Helped create the new generation of SAAS services for the company all the way from database architecture to the frontend using Ruby on Rails;
- Led the Petcare project. A platform to help municipal dog kennels manage their animals and take better care of them;
- Introduced and maintained React islands in Ruby on Rails applications creating the application's custom asset pipeline using Gulp and (later) Webpack as the main tools;
- Developed a React Native mobile application for Portugal's Health Regulatory Authority to facilitate the registration and management of inspections at healthcare establishments, including private clinics. Integrated API-driven dynamic forms to retrieve and render complex form structures, enabling data capture and storage, with offline functionality to support reliable operation without an internet connection.
- Developed multiple React Native mobile applications for municipal authorities, integrating with a custom-built CMS to retrieve, display, and manage dynamic content. Implemented API integrations to ensure content was delivered efficiently and consistently across applications.

EDUCATION

ISEP
Computer Science Bachelor
2011 - 2014

SKILLS

- Software Design & Principles
- System Design
- React Expert
- TypeScript
- Next.js and SvelteKit
- Svelte, Vue and Solid.js
- CSS, SCSS, Tailwind
- Vite and Vitest
- Playwright
- CI/CD Optimisation
- React Native
- Node.js
- .NET
- Ruby on Rails
- PHP
- Golang
- PostgreSQL, SQLServer and MySQL
